

SYSTEMS INTEGRATION

A Higher Education Business Solution Provider

PSS can quickly and cost-effectively tackle your system integration projects. PSS has both the technical expertise and the tool-set to facilitate real-time communication and data exchange between 3rd party products or databases and your Student Information System.

PSS Communication Service Provider

Premiere Systems Support's Java and XML based Communication Service Provider (**CSP**) is a highly configurable engine facilitating communication between disparate internal and external applications and an institution's strategic Student (or Enterprise) Information System.

The PSS Communications Service provider (**CSP**) is specifically designed to be a low cost, easy to install, and low maintenance solution. The Java based service provider is compatible with all major Student Information Systems (SIS) or any JDBC compliant database. The service is designed to serve as a single communication point for any XML-based communication between the institution's SIS and another application. The **CSP** can be easily configured to handle any type of XML transactions, and also offers existing transformation modules for many major 3rd party applications.

PSS staff will work with an institution's IT department to quickly deploy the solution within their existing architecture. The CSP is designed to handle any real-time communication projects, yet not interfere with existing SIS communications.
